GCHD Tuberculosis (TB) Control Services division protects the health and well-being of the community by screening, diagnosing and treating people for TB infection/disease. All treatment is funded by State and Federal grants and operates under the direction of, Dr. Phillip Keiser, Local Health Authority. The TB division also educates, investigates and assists people who come in contact with TB. Additional services include coordination and support to medical providers in Galveston County and health care facilities. If you have tested positive for TB and have had a chest x-ray, bring all documentation to the GCHD TB Clinic on a clinic day to receive INH Therapy and treatment.
